METROFIRE-Running Card User Guide

The following information is supplied as a guide to the use of the Metrofire 10-Alarm Running Cards.

Resources on the 10-Alarm Run Cards are to be considered AUTOMATIC, meaning the sending department should not be waiting for a request to send the resource. When an alarm level is struck the resource should be dispatched to the incident by the sending community.

The heavy line separating the alarm level blocks indicate the level at which the Metrofire Control Center takes over the dispatching function.

(...) Units noted in parenthesis denote units that are responding to the fire scene from a previous cover assignment. At local option, some communities have elected to have covering apparatus remain in their assigned stations and, on subsequent alarms, apparatus responding from other communities report directly to the fire.

* or ** Asterisks denote communities outside of the Metrofire district. Notations at the bottom of the card indicate the method required to contact them. The Control Center will generally make contact through the statewide network.

Apparatus that appear under "COVER" portion of the 10 Alarm Community Run Card, cover for all the alarms that the blocks cover.

@@ Is a response that will be assigned by the local Fire Alarm/Dispatch Office

means there is NO COVER assignment for that specific alarm level.

Notation of unit numbers listed with a community on cover assignments denote the unit or station to be covered in the requesting community. Where Engine and Ladders are covering at the same station they are grouped together and shaded to distinguish. The top heading under the "COVER" lists the type of resource "ENGINE", ENGINES, or LADDER.

The Additional Apparatus; Engines and Ladders block at the bottom of the form indicate additional units that may be assigned beyond the 10th Alarm level, while still maintaining the required district protection.

Responsibility for dispatch of lower alarm levels, as designated on the running cards by the heavy line separating the alarm level blocks, remain with the local community. Where standard assignments exist, they have been listed. Due to the varying assignments within individual

communities, many lower level assignment blocks have intentionally been left blank. It is imperative that utilization of mutual aid resources at the lower alarm levels be reported to the Control Center.

The Statewide Fire Mobilization Plan (SFMP)- If Metrofire resources are exhausted an IC can implement the SFMP and is governed by the specific Fire District the community is a member of and not a mutual aid organization. The District 13 Runcards can be found at mass.gov/mema. If another Fire District implements the SFMP and District 13 is to respond the specific inventory for the specific Task Force requested can be found at mass.gov/mema. District 13 (the majority of Metrofire) is broken up into multiple Task Forces. Response to a SFMP is governed by the SFMP plan and not Metrofire. Refer to Procedure 181.00 for Requesting Aid, and Procedure 182.00 to Send Aid.

A blank run card for requesting changes to a community's running card is included at the end of the running card set. All changes must be approved by Metrofire and published prior to taking effect.

METROFIRE-Summary Status and Activity Reporting

Metrofire Control operates on the UHF frequency of 483.2875 MHz (White Channel) and all community dispatch centers in the district will communicate with the control center and each other on this frequency. **No portable or mobile radios** will operate on this frequency.

The Metrofire Mutual Aid System is only as effective as the communications between communities and with the Control Center. Listed below is a summary of actions and protocols required to be utilized by local community dispatchers.

- The Control Center must be notified each time your department's apparatus responds to or returns from a mutual aid assignment. Line boxes do not require notification unless a company is committed at a fire or incident at the location.
- The Control Center must be notified each time a working fire exists, or a multiple alarm is transmitted in your community. Provide the Alarm Level, Location of the incident, type of incident, Fireground and covering radio channel assignment, as well as any information or direction from the IC.
- Report availability of mutual aid resources **ONLY** during the daily radio test. If availability of resources has changed for any reason, when requested by the Control Center to respond to another community, simply state, "Unable to respond" and the Control Center will request the first due units from the next alarm level to respond.
- Request coverage for unfilled routine assignments or unusual activity levels. Coverage may be obtained from specific communities if requested. If no community is specified, the Control Center will request the first due units from the next alarm level to respond.
- Request greater alarm levels in addition to the normal assignments by requesting the specific level required. Provide the Alarm Level, Location, and Channel Assignment. Additional information such as Staging Location, Specified Routes, etc. may be necessary.
- Request specialized apparatus or equipment, giving details of need and location of the incident. This includes the HazMat Units, Air Supply Unit, Communications Unit, Rehabilitation Unit, State Police, MBTA, CISD Team, and other specialized units.

Announcements of multiple alarms, activation of special teams, evacuation signals and status reports on incidents will be broadcast on White Channel 483.2875 MHz(Dispatch Channel).
